Detail-oriented QA Engineering student seeking a hybrid QA Engineer role at Tieto. ISTQB-aligned testing practice demonstrated through a full QA portfolio on a React Native mobile application: 11 test cases, 10 executed across Android/iOS, 28 evidence files, automation layer, CI/CD integration, and full traceability documentation.

EDUCATION

Ingenieria Informatica (Computer Engineering)

Facultad Politecnica - Universidad Nacional de Asuncion | Currently enrolled

- Relevant coursework: Software Engineering, Database Systems, Operating Systems, Data Structures, Discrete Mathematics, Project Management
- Academic projects include full SDLC participation (requirements analysis through deployment testing) for a course management system

SKILLS

QA & Testing: Manual testing, ISTQB-aligned test design (equivalence partitioning, boundary value analysis, state transition, decision tables, error guessing), traceability management, defect reporting, test execution documentation

Automation: pytest, requests (REST API testing), Appium (mobile), Selenium WebDriver, Atom XML parsing, CI/CD pipeline integration (GitHub Actions, Azure DevOps)

Tools: Azure DevOps, Git, pytest, ruff, mypy, black, markdownlint, yamllint

Programming: Python, JavaScript, TypeScript, Bash

Mobile: React Native (Android/iOS), Android Emulator, iOS Simulator, cross-platform testing, TalkBack accessibility

Languages: Spanish (Native), English (Professional working proficiency)

ISTQB FOUNDATION KNOWLEDGE

- Test process: planning, analysis, design, implementation, execution, and closure phases
- Black-box techniques: equivalence partitioning, boundary value analysis, state transition testing, decision tables, use-case testing
- White-box techniques: statement coverage, branch/decision coverage (conceptual foundation)
- Static testing: formal reviews, walkthroughs, technical reviews, inspections
- Test management: estimation (experience-based), test monitoring/control, incident management
- Tool support: test management tools, execution tools, defect tracking, CI/CD integration

PROJECTS

QA Portfolio - arXiv Papers Mobile

github.com/gesttaltt/qa-arxiv-mobile | 2026

- Full QA lifecycle for a React Native mobile application (search, favorites, PDF management)
- Defined 11 test cases using ISTQB black-box techniques (equivalence partitioning, BVA, state transition, decision tables)
- Executed 10/11 test cases across Android and iOS; collected 28 evidence files (animated GIF walkthroughs + screenshots)
- Documented detailed execution logs for all test cases with step-by-step results, issues found, and follow-up actions
- Maintained bi-directional traceability from 4 user stories through test cases to execution evidence
- Designed API-level automation tests (pytest + requests) for arXiv search endpoint, replacing incorrect Selenium-based tests
- Configured CI/CD pipeline (GitHub Actions + Azure DevOps) with linting, type checking, and test execution stages
- Authored ADO-style documentation: test plans, traceability matrices, coverage summaries, requirements analysis, defect reports

Automation Test Suite - arXiv API Integration
2026

- Implemented 7 REST API test scenarios: valid keyword, empty, multi-word, max_results, whitespace, special characters
- Atom XML parsing with ElementTree for structured entry title/summary validation
- Created Appium smoke tests for mobile UI automation (search and favorites flows)

EXPERIENCE

Freelance QA & Software Development
2024 - Present

- Functional and regression testing for web and mobile applications
- Manual test case design and cross-platform test execution
- Python automation scripts for API validation and data processing

Academic Projects - Universidad Nacional de Asuncion
2023 - Present

- Database Design: Normalized relational schema (3NF), CRUD with Python + PostgreSQL, data integrity test cases
- Software Engineering Workshop: QA planning and execution for a course management system across full SDLC

CERTIFICATIONS & TRAINING

- ISTQB Foundation Level (CTFL) - In progress (scheduled)
- Python for Testing - pytest, unittest, API testing
- Azure DevOps Fundamentals - Work items, Test plans, Pipelines
- Git & GitHub - Branching strategies, Pull requests, CI/CD

ADDITIONAL INFORMATION

Age: 25 (born 20 November 2000)
Location: San Lorenzo, Paraguay (Postal Code: 2160)
Work Authorization: Paraguay - eligible for hybrid/remote work
Position Target: QA Engineer - Tieto (hybrid, Paraguay)
Availability: Immediate
